Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Allowable Subject Matter

1. Claims 1-3, 5-8 and 10-18 allowed

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 19 rejected under 35 U.S.C. 103(a) as being unpatentable over Ishinaga (6,476,410) in view of Udagawa (2003/0141509).

Regarding Claims 19, Ishinaga discloses a backside light emitting chip type light emitting element and insulating substrate therefor where in Figs. 2 and 4, it is disclosed a substrate 1 having a mount surface with first light emitting element 4a and second light emitting element 4b. Four internal electrodes 2al, 2ar, 2bl, 2br are revealed on the mounting surface of substrate. Likewise, four external electrodes 3al, 3ar, 3bl and 3br are revealed on the mounting surface of the substrate. Upper external electrodes and internal electrodes 3al, 2al, 2ar and 3ar are connected via light emitting element 4ar and wiring 5a. Lower external electrodes and internal electrodes 3bl, 2bl, 2br and 3br are connected via light emitting element 4b and wiring 5b.

Ishinaga fails to disclose the required diagonal configuration between the electrodes. However, Udagawa discloses a boron phosphide based semiconductor light

emitting device and production method thereof, light emitting diode where in Fig. 5, the required diagonal configuration is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required diagonal configuration in Ishinaga as taught by Udagawa, in order to have a light emitting element with ease of manufacture.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fazli Erdem whose telephone number is (571) 272-1914. The examiner can normally be reached on M - F 8:00 - 5:00.
